

Software Development

Aware of such responsibility and understanding that the transformation of the way of doing things implies changes in people's approaches towards work, we put all of our enthusiasm into action when a community calls and invites us to help in the process of adopting technology. In short, we are proud to make technology create a positive initial experience (wellbeing that is immediately observed by users) leading to a company's harmonious growth and development.

As to the tools and work environments we use:

- # Development ambients: Linux, Windows, SUN-Solaris
- # Preferred program languages: Pearl, Java, XML, XSL
- # Use and spread of Open Source code products and systems.
