

How do we work?

Along this path we have walked, the path of being an organization, we have met with several requirements. Through our Internet Forums, we have been in contact with thousands of members who have sent us their opinions or have voted for or against the views expressed by a participant in a forum. We think that everybody has the right to air their stands.

Corporate sites which tell people what an organization does, or information channels with over 500 pages are very successful applications of our platform. As examples, we can mention [CONAMA](#) , [Clean Air Initiative](#) and [Educarchile](#) .

We have also made Contact Directories where communities come together. We think a website is more than an organization's window which has static information: actually, it is a most powerful channel to communicate messages to a specific target. In this field, our aim is to help build the community's info channels so that their chores are coordinated in a simple yet efficient way. This is reflected in the Corporación Clima de Emprendimiento Organizado, dwelling at www.ceo.cl

We took inspiration to develop Newtonberg Engine from the web media. But after a little while, we realized that our content management system could also be used outside digital publications, and in many areas: intranets, e-commerce, e-learning, corporate sites, et cetera, as the Engine can manage almost any type of document.
