

Software platforms

Newtenberg has focused its dedication and effort on the task of managing knowledge. This entails aspects like documenting, retrieving, classifying, relating, visualizing, adding and deleting information. Our aim is to come up with a multi-purpose technological platform to deal with the above mentioned tasks. The main feature of this platform is its simplicity, as it acknowledges that its main function is "to Document Conversations" and "to Build a Record of Distinctions Performed by an Observer" ;-)
